

BIM222-INTERNET PROGRAMMING-HOMEWORK II

Add styling to your own web sites, which you created (structured with HTML) in Homework I, by using **"Bootstrap"**, as well as your own style sheets. Your web sites should also follow **"Responsive Web Design"**, so they need to be automatically adjust themselves to look good on all devices, from small phones to large desktops. Try to make your HTML pages styled as same as possible for usability.

You have to submit all your work (codes, photos, i.e., what are necessary to see/run your work) through the course web site (ceng.anadolu.edu.tr) within the submission deadlines.

As in Homework I, you also need to publish your web sites on the Internet, in order to get experience. Please, don't forget to add the **"info.txt"** file which includes the web address/URL of your web site.

Note 1: *No homework will be accepted by mail or after the deadlines!! Please do NOT send any work by mail...*

Note 2: This is NOT a group assignment. It should be done individually.
